

Jacobs Neurological Centre

Overview

Elysium Neurological provides specialist rehabilitation and care for adults living with a range of different and complex neurological conditions such as acquired brain injury, spinal injury, progressive and other neurological conditions. Jacobs is located in Sawbridgeworth, Hertfordshire providing individual rooms and therapy facilities to meet the specialist requirements of those affected by complex neurological conditions.

Pathways

We are committed to providing the highest standard of neurological care and rehabilitation, to support a wide range of specific conditions with an even wider range of symptoms. Jacobs provides specialist care and expert therapeutic interventions encompassing physical, psychological, emotional, and social needs of men and women affected by the majority of neurological conditions including:

Complex Physical Conditions -

including disorders of consciousness, spinal injury, tracheostomy care, ventilation and complex stroke

Neurorehabilitation –

assessment, rehabilitation, flexible packages for Acquired or Traumatic Brain Injury (ABI or TBI) or neurological conditions

Neuroprogressive Conditions -

including Huntington's disease, Motor Neurone Disease, Multiple Sclerosis and Parkinson's disease

Activities

Our services facilitate a range of activities based on people's interests and wishes on an individual or group basis. Examples include film showings, quizzes, computer access, access to places of worship and leisure pursuits. Community visits can be facilitated with our wheelchair accessible transport.

Accommodation

Accommodation is provided in purpose-built facilities with individual en-suite bedrooms and dedicated therapy areas. Several bedrooms at Jacobs Neuro Centre are equipped with high dependency facilities which include ceiling tracking hoists, wall mounted suction and oxygen equipment and flexi position TV.

We are experienced in supporting people moving out of hospital who require active and longer-term neurorehabilitation and complex disability management. Packages of complex physical healthcare in relation to a neurological event or progressive conditions are available including tracheostomy and ventilator care and support for people with a prolonged disorder of consciousness as well as end of life support. We also support people who require a shorter period of admission for respite care.

Therapy Suite

In addition to the equipment in people's private bedrooms, we provide separate therapy spaces for people to engage in bespoke therapeutic programmes designed by our highly specialised team of clinicians.

There are physiotherapy rooms with specialist equipment including standing frames, wall bars and easy to use ceiling hoists. Therapeutic programmes are designed to maximise recovery, maintain wellbeing, and enhance quality of life.

The well-equipped multi-sensory environments with colour-shifting lights, projected images and sounds, tactile objects and scents are designed to stimulate and relax.

There is an onsite shop which provides an opportunity to buy basic supplies without leaving the service. The grounds offer residents and their families extensive, accessible outdoor spaces that surround our facilities along with ample parking.

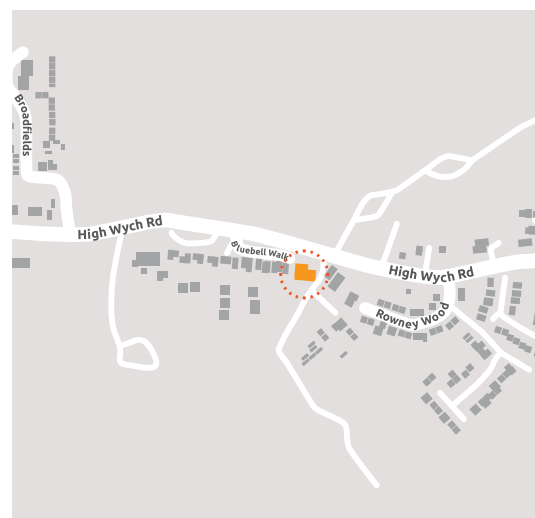

The family visiting facilities are quiet, spacious lounges where residents can spend private, quality time with family and friends including visiting children.

For residents receiving palliative care, the environment is fully adapted to provide individualised support where family members can spend quality time with their loved one.

Outcomes

Evaluation of the effectiveness of therapeutic programmes takes place through the use of observational recording measures, behavioural recordings, discipline specific tools and clinical supervision. Progress is routinely reviewed at weekly clinical review meetings. Widely accepted and recognised outcome measures are routinely completed on admission, at major reviews of progress and at discharge. Together, these measures underpin goal planning and track responses to rehabilitation and care with a focus on quality of life.

Team

We have an expert Multidisciplinary Team (MDT) with specialist skills including nursing staff, speech and language therapy, occupational therapy, dietetics, physiotherapy and Neurorehabilitation Consultant. Our team is based onsite to ensure that each person receives the specialist interventions and support they need to achieve their individual goals and outcomes.
